Chapter 6 presents time-series methods in the context of macroeconomic investment models. Unlike most econometric textbooks, even those with good examples, the econometrics serves the economics, as it should be in the actual practice of economic research. The reviews of economic literature are exceptionally good--in every chapter on every topic.

Modified quadratic hill-climbing is one of the more powerful algorithms known for function optimization but is not widely available outside of the software package GQOPT. The efficacy of the SAS steps is illustrated using Rosenbrock's function, Savin and White's Box-Cox extended autoregressive model, and Klein's Model I.
