VHF FM Aircraft Receiver is a superregenerative receiver developed for listening to FM transmitters but also tunes the aircraft band and the top portion of the FM broadcast band. Receives both AM and FM (107MHz to 135 MHz). You can use this receiver with the any FM transmitter. The receiver is amazingly simple using only one transistor for the receiver section and one IC for the audio section.

In radio communications, a radio receiver, also known as a receiver, wireless or simply radio is an electronic device that receives radio waves and converts the information carried by them to a usable form. It is used with an antenna. The antenna intercepts radio waves (electromagnetic waves) and converts them to tiny alternating currents which are applied to the receiver, and the receiver ...

Qi (pronounced / tʃ iː / CHEE; from the Chinese word qi) is an open interface standard that defines wireless power transfer using inductive charging over distances of up to 4 cm (1.6 inches), and is developed by the Wireless Power Consortium. The system uses a charging pad and a compatible device, which is placed on top of the pad, charging via resonant inductive coupling.

Qi (standard) - Wikipedia

phone: 845-297-9771 fax: 845-297-9772 A Glolab KIT consists of a PC board and parts that must be mounted on the board and soldered in place by a user. A manual with assembly instructions, schematic diagram and physical layout diagram is included with a kit. Other user supplied parts may be required in order for a kit to perform a specific function after it is assembled.
