Piecewise functions are just what they are named: pieces of different functions (sub-functions) all on one graph. The easiest way to think of them is if you drew more than one function on a graph, and you just erased parts of the functions where they aren't supposed to be (along the $\backslash(x)$'s); they are defined differently for different ...

Piecewise Functions - She Loves Math

A piecewise function is a function represented by two or more functions, each corresponding to a part of the domain. A piecewise function is called piecewise because it acts differently on different "pieces" of the number line. Possible Descriptions: • The graph is a function. • The graph is composed of part of a line
