I have a 23HP liquid cooled Kawasaki engine on a Scag commercial.... These liquid cooled engines are not tolerant to overheat and anytime you have a head gasket blown, the thermostat should be changed and the water pump checked. Also when filling the system, all the air has to be bled out or the cylinder heads will overheat and blow the gaskets.

4-stroke liquid-cooled v-twin gasoline engine Service Manual

I just wanted some input on what you guys thought were better air or liquid cooled. What i've heard is that there's been nothing to show that a liquid cooled engine lasts any longer than air cooled and that air cooled engines have been around forever! I just know that replacing a water pump at around 700 hours could prove to be mighty costly.
