New Flywheel Alternator with solid state regulation

The machine it is in has been converted to a 12V negative ground system. The engine starts fine and runs OK, but the charging system, naturally, is inactive. The machine has been set up this way since at least 1994. I am wondering if it's even possible that the old generator might be able to be fixable. Here is the (simple) circuit from the manual:

Some gasoline engine driven welders don't have a conventional starter or battery charging generator at all. Instead, they apply battery voltage to the machine and it motors the engine until it starts. These systems have a separate charging winding internal to the welding machine itself. My Wisconsin-powered Hobart is set up this way.
