### **Chapter 1, Lesson 1 What Is Biology?**

Organelles within a cell work together to enable the cell to carry out its function. The fact that each organelle performs a different function within the cell is referred to as division of labour. The type, number and position of organelles will vary between cells dependent upon the cells role, environment and "life stage".

Dermal tissue: Consisting primarily of epidermal cells, dermal tissue covers the entire surface of a plant. Ground tissue: This tissue type makes up most of a plant's body and contains three types of cells: Parenchyma cells are the most common ground tissue cells. They perform many basic plant cell functions, including storage, photosynthesis, and secretion.
