The purpose of a gasoline car engine is to convert gasoline into motion so that your car can move. Currently the easiest way to create motion from gasoline is to burn the gasoline inside an engine. Currently the easiest way to create motion from gasoline is to burn the gasoline inside an engine.

How Car Engines Work | HowStuffWorks

This begins the cycle by bringing air and gas into the engine. Compression: As the compression cycle begins, the piston moves up and pushes the air and gas into a smaller space. A smaller space means a more powerful explosion. Combustion: Next, the spark plug creates a spark that ignites and explodes the gas.

The engine block - also known as a cylinder block - contains all of the major components that make up the bottom end of a motor. This is where the crankshaft spins, and the pistons move up and down in the cylinder bores, fired by the fuel combusting. On some engine designs, it also holds the camshaft.

Beginner's Guide: What Is an Engine Block (and What Does ...

If the engine overheats, it's common for head gaskets to fail which introduces coolant inside the engine block within oil galleries. This dilutes the engine oil and causes a lack of lubrication, or excessive heat. Knowing what caused the engine to fail is the first step in determining whether or not an engine rebuild or replacement is needed.

What Are the Benefits of Having an Engine Rebuilt Instead ...

What does engine/motor oil do? Engine oil plays a few important roles; the first and most obvious is that it lubricates the engine and its components. It starts its journey when it's sucked in by a pickup tube, pressurized and then sent around the entire engine through a circuit of oilways.

Engine tuning is the adjustment or modification of the internal combustion engine or Engine Control Unit (ECU) to yield optimal performance and increase the engine's power output, economy, or durability. These goals may be mutually exclusive; an engine may be de-tuned with respect to output power in exchange for better economy or longer engine life due to lessened stress on engine components.
