Engine Tin. The engine compartment in a VW, including the tinware surrounding the engine, is a closed system designed to keep air flowing around the oil cooler and cylinder and head fins. Anything that defeats this system will make the engine run hot. Air-cooled VW engines run quite close to their heat limits to begin with,...

The Volkswagen Type 4 was a strange member of the VW family. Some think it was the last attempt at continuing a technological tradition doomed long before. Others characterize it as the step between the "old" aircooled and the new watercooled models. It is a strange hybrid indeed if you look into the details.

### **Technology — www.type4.org**

The Type 4 Engine Thread FAQ. The Type 4 engine was also used on the Volkswagen version of the Porsche 914. Volkswagen versions originally came with an 80 horsepower (60 kW) fuel-injected 1.7-litre flat-4 engine based on the Volkswagen air-cooled engine. In Europe, the four-cylinder cars were sold as Volkswagen-Porsches, at Volkswagen dealerships.

Type 1 and Type 4 Aircooled Engine Tinware. Not hot enough to cook your breakfast on as I had expected. This is he proudly stated is because the tinware is fitted properly and that he had fitted an aluminium heat shield over the exhaust. Apparently VW used to ship the vans with a second skin on the exhaust to keep the heat down.

### **Tinware | Aircooled Crazy**

One visual difference is that all Porsche Type 4 engines have the oil dip-stick and oil fill mounted on top of the engine (where the VW Type 2 engine application has the dip-stick mounted on the rear of

the engine by way of a long oil fill tube).

The Volkswagen Type 3 (saloon/sedan, notchback, fastback) was initially equipped with a 1.5 litre engine, displacing 1493cc, based on the air-cooled flat-4 found in the Type 1. While the long block remained the same as the Type 1, the engine cooling was drastically changed to allow for a much lower engine profile.

The VW Type 1 engine breathing system changed very little from the old 1100cc's to the 1600's. VW provided a half-inch diameter vent hole on top of the generator stand near the oil filler cap. A tube ran from the vent hole to the air cleaner, providing a low-pressure path for the vented gasses to follow to the intake.
