MECHANICS OF MACHINE SIMPLE MECHANISM Pendulum pump or Bull engine: In this mechanism, the inversion is obtained by fixing the cylinder. In this case, when the crank rotates, the connecting rod oscillates about a pin pivoted to the fixed link at A and the piston attached to the piston rod reciprocates. The duplex pump which is used to supply feed water to boilers have two pistons.

Kinematic Inversions of Four Bar Chain, Slider Crank and ...

Slider-crank chain inversion arises when the connecting rod, or coupler, of a slider-crank linkage becomes the ground link, so the slider is connected directly to the crank. This inverted slider-crank is the form of a slider-crank linkage that is often used to actuate a hinged joint in construction equipment like a crane or backhoe, as well as to open and close a swinging gate or door.

The rotative beam engine is a later design of beam engine where the connecting rod drives a flywheel, by means of a crank (or, historically, by means of a sun and planet gear). These beam

engines could be used to directly power the line-shafting in a mill.They also could be used to power steam ships
