Basic Structures for Engineers and Architects Example 1 This beam has a pinned support (two restraints) at its left-hand end and a roller support (one restraint) at its right-hand end. So the total number of restraints is  $(2 + 1) = 3$ , therefore the problem is solvable and is statically determinate (SD).

The basics of the purely technical side of structural engineering design is to compare demand with capacity. On the demand side, we calculate loads, based on previous research. These loads include things like people, furniture, snow, wind, earthquakes, and the weight of the structure itself. These are what the structure needs to be able to hold up.

Structural engineering is a sub-discipline of civil engineering in which structural engineers are trained to design the 'bones and muscles' that create the form and shape of man made structures. Structural engineers need to understand and calculate the stability, strength and rigidity of built structures for buildings and nonbuilding structures. The structural designs are integrated with those ...
