Well, I checked, and there hasn't been a "manual vs automatic transmission" thread title here on this forum for a couple of years. So I thought I would start one to have members discuss their thoughts on the matter, especially in light of recent cars like the 991 GT3/Turbo and all the recent hypercars (LaFerrari, P1, 918, etc) that do not even offer the option of a stick shift transmission with ...

A manual is better for something simpler with an old-school feel, like the BMW 1 or 2 Series, while a DCT is better for something a bit more high-tech and high-performance, like a Nissan GT-R.

**DCT Transmission: How they work and why we use them**

A semi-automatic transmission (also known as a clutch-less manual transmission, auto-manual, automated manual transmission, trigger shift, flappy-paddle gear shift or paddle-shift gearbox) is an automobile transmission that combines manual transmission and automatic transmission. It allows convenient driver control of gear selection.

But at the same time, there are some types of cars I'd rather have paddle shift in than a manual. I think paddle shift is ideal for grand touring cars, like a Ferrari F12, or for fast sedans, like a BMW M5. I also like paddle shift for the really insane hypercars, like the McLaren P1, because the speeds are legitimately racecar-fast.

**Why Is Paddle Shift Killing the Manual Transmission, and ...**

Most automatic cars these days have a manual mode, which allows you to change gears on demand instead of waiting for the gearbox to do its own thing. Depending on the car, manual shifting can be done via the gearlever and/or racing-car style paddle shifters behind the steering wheel.
