The Year 2000 problem, also known as the Y2K problem, the Millennium bug, the Y2K bug, the Y2K glitch, or Y2K, is a class of computer bugs related to the formatting and storage of calendar data for dates beginning in the year 2000. Problems were anticipated, and arose, because many programs represented four-digit years with only the final two digits — making the year 2000 indistinguishable ...

Year 2000 problem - Wikipedia

Math is not needed for programming, because programming is math. It can be good math, or bad

math (like when orangutan's long call is transliterated into Ook language), but whenever a programmer designs an object model of something, he is (usually unknowingly) performing an act of mathematics. So, again, one doesn't need to read math books to program, but that changes nothing on the fact that ...
