DRIVING DOWNHILL. Follow the natural fall line the route water would take down the slope and keep your wheels straight. If the vehicle starts to slide, increase throttle to match the ground speed and regain steering control. If driving a manual, never roll or reverse downhill in neutral or with the clutch depressed.

How to Drive Up & Down Hills - Mountain Driving - Land Rover

Gravity affects your speed when you drive uphill and downhill. Traction relates to gravity in that it is the result of friction between the road and your tires caused by the weight of the car (the pull of gravity). Traction is a vital component of driving because you need traction to steer.

Drivers Ed Lesson 3 Flashcards | Quizlet

Remember when driving downhill your stopping distance increases especially if the road is wet. The risk of skidding also increases so engage your brakes gently and try and leave a four second gap between you and any vehicle in front. Don't coast - driving with your clutch pedal pressed down or in neutral - as this will make your car run faster.
