Section 4-2: What Shapes an Ecosystem? Together, biotic and abiotic factors determine the survival and growth of an organism and the productivity of the ecosystem in which the organism lives. Community interactions, such as competition, predation, and various forms of symbiosis, can powerfully affect an ecosystem.

### **Chapter 4 Resources - BIOLOGY by Miller & Levine**

shape ecosystems. 2.Three community interactions are competition, predation, and symbiosis. 3.The class of symbiosis in which one member benefits while the other is neither helped nor harmed is commensal-ism. An example is barnacles attached to the skin of whales. 4.The two kinds of disturbances that change ecosystems are natural and human ...

Supplement. An ecosystem is made up of plants, animals, microorganisms, soil, rocks, minerals, water sources and the local atmosphere interacting with one another. The biotic factors and abiotic factors interact as a system and are linked to one another via nutrient cycles and energy flows. For instance, the energy from the sun is captured by plants through photosynthesis.
