Hi, I have a problem with the radiator fan running continuously. History: Problem occurred a few months back and the mechanic replaced the high pressure A/C sensor. This stopped the radiator fan running all the time and also fixed the lack of cold air from the air-conditioning. However, the problem has come back with the radiator fan.

My Volvo has a new multichamber coolant overflow tank that transfers coolant onto the ground. On one side of the tank, the sensor tells me I'm low on coolant, so I fill it up to the line. Then, the truck runs warm for a few hours, and coolant flows back into the other side, eventually filling up that chamber until it drains out hose to the ground.
