A four-stroke 12 cylinder engine has an even firing order if cylinders fire every 60° of crankshaft rotation, so a V12 with cylinder banks at 60° or 180° will have even firing intervals without using split crankpins. By using split crankpins or ignoring minor vibrations, any V angle is possible.

### **V12 engine - Wikipedia**

This was cured in the 213E by choosing a firing order that systematically loaded and then unloaded the crankshaft. This tool works for any 12-cylinder engine with cylinder pairs connected to the same crankpin of a 6-throw, 120° crankshaft, regardless of bank angle. Because of this, several opposed and H-configuration engines are included.
