According to the instructions the sending wire for Erinrude is typically gray. I took the cover off the control box and found the gray wire capped and in plain sight. I connected the wire to the sending terminal on the tachometer, set the tach to 4 cylinder, started the engine and everything was good.

### **Outboard Tachometer: Amazon.com**

Connect the tachometer's black wire to the boat's common ground. Solder, using silver-bearing rosin-core solder and a soldering iron, the tachometer's "sender" wire to the green wire extending from the throttle control box. Slide the heat shrink tube over the soldered connection. Apply heat from a heat gun until the shrink tube contracts around it.
