Smartphone photos, even if you have the very latest gear, just can't compete with the quality of a picture taken on a dedicated camera. Print anything bigger than a 5" x 7" shot and it won't be as rich, clear, or powerful as it would've been had you used a "real" camera. The same is true of video, where the ability to shoot in 4K on a lens larger than a nickel is seriously mind ...

Film speed is the measure of a photographic film's sensitivity to light, determined by sensitometry and measured on various numerical scales, the most recent being the ISO system. A closely related ISO system is used to describe the relationship between exposure and output image lightness in digital cameras.. Relatively insensitive film, with a correspondingly lower speed index, requires more ...
