In computing, scheduling is the method by which work is assigned to resources that complete the work. The work may be virtual computation elements such as threads, processes or data flows,

which are in turn scheduled onto hardware resources such as processors, network links or expansion cards.. A scheduler is what carries out the scheduling activity. Schedulers are often implemented so they ...

Scheduling (computing) - Wikipedia

This is a list of software packages that implement the finite element method for solving partial differential equations.

List of finite element software packages - Wikipedia

Joining any new company—with an established culture and programming practices—can be a daunting experience. When I joined the Ansible team, I decided to write up the software engineering practices and principles I've learned over the years and to which I strive to work. This is a non-definitive, non-exhaustive list of principles that should be applied with wisdom and flexibility.
