The BMW engines inline 6 cylinder N51 N52 N54 N55 are equipped with electric water pump. This allows the DME to fully control and modulate the coolant flow through the engine without dependency on RPM. This electric design allows for engine power output efficiency and balanced cooling responsibilities for the engine.

The two options for the repair is obviously replace the engine block or you can try to use a epoxy but this could still leak. I would use JB weld for aluminum to try to repair it but it can not be a leak that is under pressure meaning if the coolant is coming out quickly under pressure like a stream this will not work.

I believe the N52 Vanos problem involved occasionally sticky (and somewhat noisy) lifters. But if yours aren't making noise, don't worry about it. The 90's 540i engine issue had to do with the Nikasil cylinder liners not playing nice with the high sulphur levels in US gas. BMW has since changed the cylinder lining material. Tom
