After a block has been added to the end of the blockchain, it is very difficult to go back and alter the contents of the block. That's because each block contains its own hash, along with the ...

Blockchain, Explained - Investopedia

A blockchain, originally block chain, is a growing list of records, called blocks, which are linked using cryptography. Each block contains a cryptographic hash of the previous block, a timestamp, and transaction data (generally represented as a Merkle tree).. By design, a blockchain is resistant to modification of the data. It is "an open, distributed ledger that can record transactions ...
